

WORKSHOP-17

Practical Autopsy Guidelines with hands on Training on Pulmonary and Cardiovascular autopsy.

The autopsy is intended to educate postgraduate Pathology students and enthusiastic pathologists to train further.

Objectives are

- Techniques of performing medical autopsy, external examination, and evisceration techniques.
- Collection of toxicology samples and examination of different systems.
- Special emphasis will be given on hands on training in dissection of the heart and lungs. This includes individual training in cutting the heart, examination of the coronaries, valves and conduction system.
- Cutting techniques of lungs will be taught with emphasis on pulmonary embolism, pulmonary tumors and examination in cases of COPD.
- Determination of cause of death and writing of Notification of Death (NOD) will be taught.
